Design plans for the US 60 (Grand Avenue), Loop 303 to 99th Avenue widening project are nearing completion. Community members are invited to attend public information meetings Dec. 2 to review and provide comment on the final design plans for this project.

In accordance with the Regional Transportation Plan (RTP), Grand Avenue is scheduled to be widened from its current condition to six traffic lanes (three lanes each way) between Loop 303 and 99th Avenue. Construction of this project is expected to begin in 2009 and be completed in 2011. Widening is planned to occur primarily within the existing median to minimize the need for additional right of way. The project includes improvements at signalized intersections but no grade separations (underpasses or overpasses). The feasibility of constructing future grade separations is part of a separate study of potential projects to be funded in the future.

A brief presentation on the project will be made at the meeting, followed by an open house where project information in the form of maps and displays will be available for viewing. Representatives from the ADOT design team will be present to answer questions during and after the formal presentation.
